

TAGGED, CLEANED & DELIVERED!

The UHF RFID Workflow

UHF RFID from Datamars will help you deliver orders with zero defects. We help you obtain defined, custom asset tracking data that will allow you to report item-level history to your customers. UHF RFID gives you the ability to tell customers where and when each item was last seen. You can eliminate costly errors and shortage reporting that cost you both productivity and money.

Data communication through the Cloud adheres to your internal security protocols while boosting efficiency to today's upper limits.

For more information on how UHF RFID can work for your business, contact us by phone or email:
