

## Software Quality Assurance Analyst

---

**Datamars** is a global data solutions company with a 30+ year legacy in animal and textile solutions. We're expanding our Software team - the role of a Software QA Analyst can be based in our HQ in Lamone, Switzerland or in our Serbian office (a hybrid workplace).

### An insight into the role

Being part of a team of two members, you will have ownership of the whole testing cycle – you will perform quality assurance and testing as well, design test strategies and improve test automation. The position sits within the Global Software Team, reporting to the QA lead and working closely with the software development. You will contribute to the new product delivery – cutting-edge web and mobile solutions across all our business lines. We're working on smart technology with the power of advanced computational modeling and machine learning to detect reliable health information critical to animal health. To learn more visit <https://datamars.com/>.

### As a Software Quality Assurance Analyst, you will:

- Perform tests at all levels for the web and mobile applications (iOS & Android): a mix of manual, automated, functional, regression, exploratory and performance testing activities.
- Review requirements, create comprehensive and well-structured test scenarios.
- Work with the support team to reproduce record and triage bugs identified by customers and provide alternative solutions while escalating for the issue to be fixed.
- Participate in defining test strategies, test plans and test reports (also by identifying metrics); suggest tools and frameworks to improve daily work.

### Key success factors:

You should have a working experience as QA Analyst, Test Analyst or in a similar role. Rather than counting the years of experience, we're looking for the ability to think in the abstract and see how small details fit into the bigger picture. We're looking for a creative mindset, critical thinking and understanding of software development. You need to be fluent in English, both written and spoken. Experience with databases, SQL query and data analysis is a must. If you are interested, but not experienced in automation, we encourage you to apply!

### Nice to have:

- Experience in developing automated tests for mobile applications (experience in developing automated tests for Xamarin.Forms applications is a plus!).
- Experience in developing automated test with Cypress, Protractor, Selenium, Rspec, Xunit or RestAssured is highly appreciated.
- Experience in using tools such as SoapUI and Jmeter.

**We offer**

- Great working atmosphere and supporting colleagues.
- Compensation reflecting your experience and skills.
- Hybrid workplace.

**Culture & Values**

- Innovative – delivering advanced integrated technologies to transform sectors
- Collaborative – sharing ideas & collaborating across global teams
- Competitive & growth mindset – Market leaders – Goal oriented – Growth focused

We are fulfilling our purpose by harnessing the power of data to measurably improve productivity and quality of life. Are you ready to join the team?

If yes, send your application (in English) to [recruiting@datamars.com](mailto:recruiting@datamars.com) (if applying for the HQ, Switzerland) or [recruitingserbia@datamars.com](mailto:recruitingserbia@datamars.com) (if applying in Serbia).

Datamars is a private company, founded in 1988 and headquartered in Lamone, Switzerland. For more information, please visit [www.datamars.com](http://www.datamars.com).
